## **DETAILED ACTION**

### ***REASONS FOR ALLOWANCE***

The following is an examiner's statement of reasons for allowance:

Prior art does not disclose or suggest either alone or combined as claimed "the second component with a coefficient of thermal expansion that differs from the coefficient of thermal expansion of the first component to give the printhead assembly an overall coefficient of thermal expansion; such that

the difference between the overall coefficient of thermal expansion and the coefficient of thermal expansion of the printhead is less than

the difference between the coefficient of thermal expansion of the first component and the coefficient of thermal expansion of the printhead modules."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 5,734,394 to Hackleman discloses a module mounting arrangement that allows controlled flexing and contracting of modules in response to temperature changes. The flexing and contracting is controlled such that it occurs uniformly, to varying degrees in prescribed directions, such that nozzle alignment is maintained throughout an operating temperature range.

US Patent 6,260,951 to Harvey et al. discloses nozzle plate support means comprising a first member to which the nozzle plate is attached and second member for supporting said first member.
